This tool is capable of packing and unpacking Coalesced_*.bin files for LE1/2.

Usage patterns:
.\LECoal.exe unpack <coalesced file> <target directory>
- Will unpack the file at <coalesced file> into a directory at <target directory>.
- <coalesced file> must exist and be a file, <target directory> will be created if missing.
.\LECoal.exe pack <unpacked directory> <target file>
- Will pack the directory at <unpacked directory> into a coalesced file at <target file>.
- <unpacked directory> must exist, <target file> will be created or overwritten.

Examples:
.\LECoal.exe unpack Coalesced_INT.bin D:\MELE\ME1_Coalesced
- Will unpack the 'Coalesced_INT.bin' file in the directory you are running the tool from
  into a bunch of files at D:\MELE\ME1_Coalesced.
- Those files can then be edited using Notepad++ / Sublime Text / VS Code / etc.
- Do not modify 'mele.extractedbin', as it will be needed for packing the files back.
.\LECoal.exe pack D:\MELE\ME1_Coalesced Coalesced_INT.bin
- Will pack a bunch of files from D:\MELE\ME1_Coalesced into a Coalesced_INT.bin file
  which will be located in the directory you are running the tool from.
- If the tool fails to find the auto-generated 'mele.extractedbin' in unpacked directory,
  the packing will fail.
